NAME: ASMA SALEEM

ROLL NO: 2024-CET-07

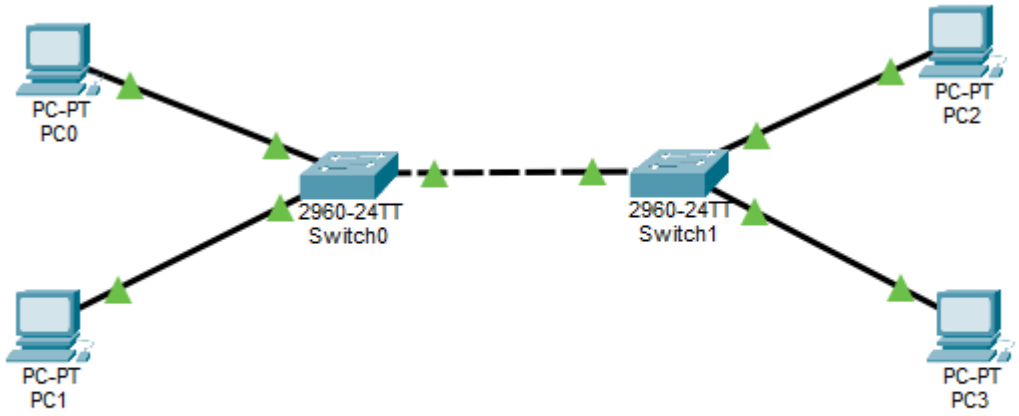
SEMESTER: 4TH

SUBJECT: COMPUTER NETWORKS

LAB TASK: 5

SUBMITTED TO: ENGR DR ASMA JAVAID

TASK: Switching and ARP (MAC Address).



```
Switch>enable
Switch#show mac address-table
          Mac Address Table
-------------------------------------------

Vlan    Mac Address       Type        Ports
----    -----------       --------    -----

   1    0007.ecc0.6103    DYNAMIC     Fa0/1
Switch#
```

```
Switch#
Switch#show mac address-table
          Mac Address Table
-------------------------------------------

Vlan    Mac Address       Type        Ports
----    -----------       --------    -----

   1    0007.ecc0.6103    DYNAMIC     Fa0/1
```

EXPLAINATION:

In this lab , a network was created using pcs and a switch in cisco packet tracer. ALL pcs were connected to the switch using straight through cables. And IP addresses were assigned in the same network range.

First, the MAC address table of the switch was checked using the show mac address-table command. At the beginning, the table had limited or no learned addresses. Then communication was tested by sending ping packets from one pc to another.

After the ping process the switch learned the MAC addresses of connected devices and stored them in its MAC address table. The table was checked again to verify the learned address
